

Video Conferencing Tips for Organizers

As organizations and individuals rush to work from home (WFH), video conferencing has become a key part of staying connected and working together. However, as this technology is rapidly developing and relatively new for so many, people need guidance on how to use these technologies safely and securely. Here are key tips for securely hosting a video conference.

Update software

Make sure you are always using the latest version of the software. New security features and bug fixes are constantly being released. The more recent and updated your software, the more secure you will be. Ensure you are always using the latest version by enabling automatic updating. In addition always quit your program when you are done with it and restart it the next time you want to use it as some teleconferencing software updates every time you restart it.
